

# LOWERING THE COST OF IN-CLOUD DATA PROTECTION WITH DELL EMC

## Total Monthly AWS Cost (EC2, EBS, and S3)

Monthly cost comparative analysis to protect 500 TB of front-end capacity

**Up to 47%**  
lower cost with  
**Dell EMC**

## WHY THIS MATTERS

Organizations are using cloud infrastructure services to reduce the capital and operational expenses associated with traditional IT hardware deployments.

However, as organizations move production applications to the cloud, they often forget that they still need the same data protection workflows and underestimate the cost of these cloud workflows.

Dell EMC solutions have a significant cost advantage over the competition for in-cloud data protection workflows as your environment scales.
