Targeting the **BEST APPLICATIONS**
for your Hyper-Converged Infrastructure

You know the value of Converged and Hyper-Converged Infrastructure
Simpler IT. Faster Outcomes. Cost Savings.

**But how do you decide?**

Without a methodology, you’re faced with choosing between:

- The Manual Approach: Involving complex, time-consuming and 100% of data points.
- Handling conflicting, subjective opinions from diverse application and business stakeholders.

**Is there an easier way?**

You need to evaluate automation through specific business criteria based on your unique business model, so you can continue to demonstrate value to the business.

Leverage automated tools to accelerate analytics-based decision making for your business.

Our experience and best practices are gleaned from over a decade of transforming thousands of application environments and deploying thousands of modern infrastructure platforms.

A manual approach, involving complex, time-consuming and 100% of data points.

**The Simpler, Faster Choice:**
Dell EMC Application Profiling Service

Leverages automated tools to accelerate analytics-based decision making for your business.

**Proven decision logic framework**
assesses your specific business requirements and application characteristics to determine the best candidates to migrate.

**Here’s how:**

- Map applications to business processes to determine the business impact of moving applications to Converged Infrastructure.
- Determine Application Suitability to determine which applications are best suited for a Converged Infrastructure environment vs. a legacy IT deployment.
- Recommends the Logical Application Architecture of web, application, and database server deployment based on application behavior patterns.

**Get your Converged Infrastructure applications ON TARGET with Dell EMC Application Profiling Services**

Contact us to learn more about how the Dell EMC Application Profiling Service can help you determine the best for your application workloads.
