Customer Personalization: Transforming Retail

Retail businesses are at a tipping point, fueled by new market pressures and new opportunities to understand and anticipate customer needs. Shoppers have more information, connect using more platforms, and are willing to share more data than ever before. Consider that 82 percent will research a product online before they visit a store.¹ Sixty-four percent are comfortable with retailers saving purchase history and preferences if the retailer then offers more personalization.² However, shoppers turn away quickly if a retailer does not meet expectations. Fifty-one percent say they will stop shopping at a retailer after just one to two poor in-store shopping trips.³

Today’s connected consumer wants a highly personalized, seamless experience across every channel, with a recent study predicting customer experience will overtake price and product as the key brand differentiator by 2020.⁴ To meet demands for an intelligent store experience, retail leaders need to create enriched, personalized experiences, powered by technologies including IoT data collection and analytics, artificial intelligence (AI), video surveillance and analysis, and augmented reality/virtual reality solutions (AR/VR). With Dell EMC solutions, retailers can improve decisions throughout the retail value chain as they collect, aggregate, and analyze data – improving margins, decreasing costs, enhancing sustainability, and reducing security risks.

Across the globe, Dell EMC leverages our strategically aligned businesses, global partner ecosystem, robust services, and financial offerings to provide end-to-end solutions that power customer-centric retail transformation. Our integrated solutions incorporate Dell EMC best-in-class hardware, software, and device offerings, coupled with deep industry expertise and consulting services, to ensure our customers keep pace with digital innovation to accelerate their own success.
