DELL EMC DATA PROTECTION SUITE

Data Protection for on-premises and in the cloud

Dell EMC Data Protection Suite provides a comprehensive solution built to protect workloads at the core to edge to cloud. This software-defined solution is ideal for environments that are rich in mission critical applications running in a variety of configurations, including NAS, ROBO, tape, hardware snap-shots, or even the most complex assortment of applications and storage.

Data Protection Suite gives you flexible deployment options. Choose the level of data protection you need to match the value of your data protection requirements. Whether you need backup and recovery, disaster recovery, any point-in-time recovery or long-term retention, Data Protection Suite offers the protection you need in a single software offering.

Database and application

With application consistent protection for leading and emerging databases and applications, Data Protection Suite empowers data owners to perform backup and recovery operations directly from native interfaces, while IT takes advantage of oversight and governance to ensure compliance. Automated discovery of databases, VMs and storage give you confidence that applications are protected with the policies needed to meet business requirements.

Integration with Dell EMC Data Domain delivers additional benefits including industry-leading deduplication and encryption, instant access to VMware image backup and client direct backup.

Cloud

No matter where you are in your journey to the cloud, Data Protection Suite protects your environment. The solution provides efficient and flexible cloud protection while taking advantage of cost-effective object storage. You can deploy backup in the cloud or extend to the cloud with backup, replication, long-term retention and disaster recovery.

Virtualized workloads

Virtualized environments with multiple hypervisors can quickly become complex and impede integration with data protection solutions. Data Protection Suite reduces these concerns with a single solution designed to support multiple hypervisors across multiple environments. Tight VMware integration brings advanced capabilities including self-service backup and recovery from native interfaces, instant access to virtual machines and automated policy assignment. In addition, vAdministrators can leverage continuous replication with any point-in-time recovery right from vCenter.

Centralized management and governance

IT organizations face challenges managing data protection across diverse locations, a condition that drives the requirement for centralized visibility and management. Data Protection Suite provides a single dashboard view across backup and recovery environments to streamline processes and provide business insight. Global oversight of application backups ensures compliance and governance.

Industry leading deduplication and performance

For a complete data protection solution, leverage the powerful combination of Data Protect Suite and Data Domain protection storage. This complete data protection solution reduces risk of data loss, provides industry-leading deduplication and superior performance.

Meet business needs and drive new outcomes

Data Protection Suite offers operational simplicity, agility and flexibility at its core. This solution makes meeting your real-time business needs easy and drives new business outcomes using this comprehensive data protection software solution.
