WHY IN-CLOUD DATA PROTECTION ARCHITECTURE MATTERS

Better In-cloud Data Protection and Resource Utilization with NetWorker and Data Domain Virtual Edition from Dell EMC

- **AWS EC2**
  - **Up to 52%**
  - Lower AWS EC2 Cost with Dell EMC

- **AWS EBS**
  - **Up to 64%**
  - Lower AWS EBS Cost with Dell EMC

- **AWS S3**
  - **Up to 66%**
  - Lower AWS S3 Cost with Dell EMC

WHY THIS MATTERS

When organizations move production applications to the cloud, they often find it hard to achieve the application-consistent restores that meet their business SLAs using the native data protection services offered by cloud providers.

Dell EMC Data Protection Software offers cost efficient unified data protection for the enterprise that centralizes, automates, and accelerates backup and recovery across the entire IT environment. This includes providing the same quality of data protection for in-cloud applications as for applications running on-premises in datacenters.
