Modernize IT

To run SAP, Microsoft SQL, and Oracle in the Intelligent Enterprise

The future is data driven

Applications and business processes are changing as decision making depends on more and more operational data, together with machine and big data.

Modern applications and databases are tapping these new data sources.

A new breed of intelligent apps are dynamically adapting to real-time data-driven events and consumer experiences. IT operations must be ready to expand and adapt to this continuous innovation cycle.

Continuous innovation cycle

Deploy and run next-generation applications and databases.

Business essentials you need now

Expand your IT foundation

Emerging database platforms from SAP®, Oracle® and Microsoft® work with data spanning from edge, to core, to hybrid cloud.

Provide data services that enable core business applications

Distributed data requires virtualization applications that access data from different locations, provide continuous data protection, and support native application development, containerization and big data clusters.

Enable insightful action through data-driven, real-time AI.

The future of IT is intelligent, expansive, dynamic, fast-moving and exciting.
