

DELL EMC IT TRANSFORMATION WORKSHOP FOR THE PUBLIC SECTOR

Accelerating delivery of IT as a service

ESSENTIALS

Comply with the Federal Information Technology Shared Services Strategy (“Shared-First”) by:

- Understanding key requirements to deliver IT as a Service—envision your transformed future state and identify gaps
- Validating mission objectives and developing recommendations for next steps—develop a high-level plan tailored specifically to your agency/command
- Realizing insights from other IT organizations—leverage benchmark data to learn how your organization compares with industry peers on key transformation metrics

BUSINESS CHALLENGE

Virtually every IT organization is trying to achieve lower operational costs, increased mission agility, and reduced risk. For many, achieving these objectives requires significant transformation from the “as is” posture of current architectures, operating models, and maturity of application delivery to business partners and mission customers.

IT executives are realizing the need to fundamentally redesign their applications, infrastructure, and operating models in order to assume a leadership position. Effective leadership addresses the risk of “shadow IT” to ensure organizational relevance and enables control of an agency’s strategic direction in terms of cloud consumption models and providers. Dell EMC® can help accelerate this transformation, enabling organizations to effectively deliver IT services and become a more agile partner to the business and the mission.

SERVICE DESCRIPTION

The Dell EMC IT Transformation Workshop accelerates an organization’s ability to deliver IT as a Service and become a broker of private, hybrid, and public cloud services. The service begins with a pre-workshop questionnaire to gather the perspectives of your IT stakeholders on key IT goals and challenges, as well as capture current and desired transformation goals. Based on the questionnaire results, a gap analysis is produced that compares your transformation readiness and benchmarks it against industry peers.

During the half-day session workshop, our team works with your key IT executives to review the results of the questionnaire, validate mission requirements, discuss the key gaps identified in the pre-workshop analysis, benchmark your readiness to deliver IT as a Service, and prioritize next steps for which Dell EMC can assist in the transformation.

Following the workshop, Dell EMC provides you with a transformation report and an executive-level summary that benchmarks how your organization compares to the best peers in your industry across your application, infrastructure, and operating models, along with recommendations for the next steps you can take to achieve your transformation objectives.

Who should attend: Senior IT executives from the infrastructure, applications, and operations teams, along with an internal line-of-business executive.

What to bring: Current two-year IT strategic plan, including existing and planned architecture, investment plan, and services catalog.

SUMMARY OF BENEFITS

The Dell EMC IT Transformation Workshop accelerates your transformation to becoming an agile partner to the business. By highlighting the key requirements for your IT organization to transform itself, you'll gain speed in deploying IT as a Service and align your transformation program to mission needs. In addition, the transformation-recommended change initiatives will help you align business stakeholders and executives in your IT organization to pursue a common goal.

Dell EMC Services professionals will work alongside your team, ensuring your transformation recommendations reflect your specific needs and the priorities of your business. You will gain from Dell EMC's experience in driving transformation for leading IT organizations around the world.

SERVICE VALUE IN THE PUBLIC SECTOR

Dell EMC Services experts understand how to apply technology to solve the unique needs of government organizations. We use field-tested tools, proven methodologies, and best practices gained from engagements across both public and private sectors to minimize risk and optimize time to value. With experience in delivering IT transformation projects to customers around the globe, we will provide expert guidance to help you achieve your goals.
