This document describes how to add an optional 25-drive DAE in
Unity All Flash and Unity Hybrid systems.
You will install the 25-drive DAE from the front of the rack, after installing the snap-in
rails into the selected space in the rack.

⚠️ CAUTION ⚠️

The enclosure is heavy and should be installed into or removed from a rack by two
people. To avoid personal injury and/or damage to the equipment, do not attempt
to lift and install the enclosure into a rack without a mechanical lift and/or help
from another person.

Note

You do not have to power down any components to add a new 25-drive DAE.

NOTICE

When Data at Rest Encryption is enabled, only drives that meet at least one of these
requirements can be used: factory new drives, securely erased/sanitized drives, or
previously encrypted drives.

- Before you start...........................................................................................................2
- Summary of tasks for installing a DAE.....................................................................7
- Verifying shipping package contents......................................................................8
- Choosing where to install the DAE........................................................................9
- Adding the new 25-drive DAE..............................................................................10
- Connect cables to installed DAE...........................................................................16
- Verifying the new 25-drive DAE...........................................................................24
Before you start

Before you begin this procedure, ensure that you have received the new part and have correctly identified its intended location in the system. Refer to your Unisphere Service section for instructions on how to identify failures, order new parts, and handle hardware components.

Additional resources

As part of an improvement effort, revisions of the software and hardware are periodically released. Therefore, some functions described in this document might not be supported by all versions of the software or hardware currently in use. The product release notes provide the most up-to-date information on product features. Contact your technical support professional if a product does not function properly or does not function as described in this document.

Where to get help

Support, product, and licensing information can be obtained as follows:

Product information
For product and feature documentation or release notes, go to Unity Technical Documentation at: www.emc.com/en-us/documentation/unity-family.htm.

Troubleshooting
For information about products, software updates, licensing, and service, go to Online Support (registration required) at: https://Support.EMC.com. After logging in, locate the appropriate Support by Product page.

Technical support
For technical support and service requests, go to Online Support at: https://Support.EMC.com. After logging in, locate Create a service request. To open a service request, you must have a valid support agreement. Contact your Sales Representative for details about obtaining a valid support agreement or to answer any questions about your account.

Special notice conventions used in this document

⚠️ DANGER
Indicates a hazardous situation which, if not avoided, will result in death or serious injury.

⚠️ WARNING
Indicates a hazardous situation which, if not avoided, could result in death or serious injury.

⚠️ CAUTION
Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

⚠️ NOTICE
Addresses practices not related to personal injury.
Handling replaceable units

This section describes the precautions that you must take and the general procedures that you must follow when removing, installing, and storing any replaceable unit.

Avoiding electrostatic discharge (ESD) damage

When replacing or installing hardware units, you can inadvertently damage the sensitive electronic circuits in the equipment by simply touching them. Electrostatic charge that has accumulated on your body discharges through the circuits. If the air in the work area is very dry, running a humidifier in the work area will help decrease the risk of ESD damage. Follow the procedures below to prevent damage to the equipment.

Be aware of the following requirements:

- Provide enough room to work on the equipment.
- Clear the work site of any unnecessary materials or materials that naturally build up electrostatic charge, such as foam packaging, foam cups, cellophane wrappers, and similar items.
- Do not remove replacement or upgrade units from their antistatic packaging until you are ready to install them.
- Before you begin service, gather together the ESD kit and all other materials you will need.
- Once servicing begins, avoid moving away from the work site; otherwise, you may build up an electrostatic charge.
- Use ESD anti-static gloves or an ESD wristband (with strap).
  - If using an ESD wristband with a strap:
    - Attach the clip of the ESD wristband to the ESD bracket or bare metal on a cabinet/rack or enclosure.
    - Wrap the ESD wristband around your wrist with the metal button against your skin.
    - If a tester is available, test the wristband.

Emergency procedures (without an ESD kit)

In an emergency when an ESD kit is not available, use the following precautions to reduce the possibility of an electrostatic discharge by ensuring that your body and the subassembly are at the same electrostatic potential.

**NOTICE**

These precautions are not a substitute for the use of an ESD kit. Follow them only in the event of an emergency.

- Before touching any unit, touch a bare (unpainted) metal surface of the cabinet/rack or enclosure.
- Before removing any unit from its antistatic bag, place one hand firmly on a bare metal surface of the cabinet/rack or enclosure, and at the same time, pick up the
unit while it is still sealed in the antistatic bag. Once you have done this, do not move around the room or touch other furnishings, personnel, or surfaces until you have installed the unit.

- When you remove a unit from the antistatic bag, avoid touching any electronic components and circuits on it.
- If you must move around the room or touch other surfaces before installing a unit, first place the unit back in the antistatic bag. When you are ready again to install the unit, repeat these procedures.

Hardware acclimation times

Systems and components must acclimate to the operating environment before applying power. This requires the unpackaged system or component to reside in the operating environment for up to 16 hours in order to thermally stabilize and prevent condensation.

Table 1 on page 4 helps you determine the precise amount of stabilization time required.

Table 1 Hardware acclimation times (systems and components)

<table>
<thead>
<tr>
<th>If the last 24 hours of the TRANSIT/STORAGE environment was this:</th>
<th>...and the OPERATING environment is this:</th>
<th>...then let the system or component acclimate in the new environment this many hours:</th>
</tr>
</thead>
<tbody>
<tr>

</tbody>
</table>
Removing, installing, or storing replaceable units

Use the following precautions when removing, handling, or storing replaceable units:

**CAUTION**

Some replaceable units have the majority of their weight in the rear of the component. Ensure that the back end of the replaceable unit is supported while installing or removing it. Dropping a replaceable unit could result in personal injury or damage to the equipment.

**NOTICE**

- For a module that must be installed into a slot in an enclosure, examine the rear connectors on the module for any damage before attempting its installation.
- A sudden jar, drop, or even a moderate vibration can permanently damage some sensitive replaceable units.

- Do not remove a faulted replaceable unit until you have the replacement available.
- When handling replaceable units, avoid electrostatic discharge (ESD) by wearing ESD anti-static gloves or an ESD wristband with a strap. For additional information, refer to Avoiding electrostatic discharge (ESD) damage on page 3.
- Avoid touching any exposed electronic components and circuits on the replaceable unit.
- Never use excessive force to remove or install a replaceable unit. Take time to read the instructions carefully.
- Store a replaceable unit in the antistatic bag and the specially designed shipping container in which you received it. Use the antistatic bag and special shipping container when you need to return the replaceable unit.
- Replaceable units must acclimate to the operating environment before applying power. This requires the unpackaged component to reside in the operating environment for up to 16 hours in order to thermally stabilize and prevent condensation. Refer to Hardware acclimation times on page 4 to ensure the replaceable unit has thermally stabilized to the operating environment.
NOTICE

Your storage system is designed to be powered on continuously. Most components are hot swappable; that is, you can replace or install these components while the storage system is running. However, the system requires that:

- Front bezels should always be attached to ensure EMI compliance. Make sure you reattach the bezel after replacing a component.
- Each slot should contain a component or filler panel to ensure proper air flow throughout the system.

Unpacking a part

Procedure

1. Wear ESD gloves or attach an ESD wristband to your wrist and the enclosure in which you are installing the part.
2. Unpack the part and place it on a static-free surface.
3. If the part is a replacement for a faulted part, save the packing material to return the faulted part.

Standard touch point colors

Touch points are component locations where you can:

- Grip the hardware to remove or install a component.
- Open or close a latch.
- Turn a knob to open, close, or adjust a component.

Standard touch point colors are terra-cotta (orange) or blue.

Note

Within this documentation, the color orange is used instead of terra-cotta for simplicity.

<table>
<thead>
<tr>
<th>Touch point color</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Terra-cotta (orange)</td>
<td>This color indicates that you can perform the task, such as remove a component with a terra-cotta (orange) lever, while the system remains powered (up/on).</td>
</tr>
<tr>
<td>Blue</td>
<td>This color indicates that a shutdown of the system or component is required before you can perform the task, such as removing a component with a blue lever.</td>
</tr>
</tbody>
</table>
Table 2 Standard touch point colors (continued)

<table>
<thead>
<tr>
<th>Touch point color</th>
<th>Description</th>
</tr>
</thead>
</table>

Handling disks

Disks are extremely sensitive electronic components. Always handle a disk gently, and observe the following guidelines:

- Follow the instructions described in Removing, installing, or storing replaceable units on page 5.
- Do not stack disks upon one another, or place them on hard surfaces.
- Make sure that the replacement disk has the same part number or the part number of an approved replacement for the faulted disk. The part number (PN005xxxxxx) appears on the disk. A replacement disk should be the same type (example: SAS, FLASH) and have the same capacity (size and speed) as the disk it is replacing.
- When removing a spinning disk, pull the disk partially out of the slot, then wait 30 seconds for the drive to spin down before removing it.
- When installing multiple disks in a powered up system, wait at least 10 seconds before sliding the next disk into position.
- Place disks on a soft, antistatic surface, such as an industry-standard antistatic foam pad or the container used to ship the disk.

Summary of tasks for installing a DAE

To add install a DAE you must complete the tasks below in the order in which they appear. This document provides instructions for completing each task.

1. Verify the contents of the shipping package.
2. Choose the space in the cabinet for the new DAE.
3. Open the console, if it covers the cabinet space where you want to install the new enclosure.
4. Remove the filler panels that cover the cabinet space for the new enclosure.
5. Install the rails for the new enclosure in the cabinet.
6. Install the enclosure on the rails.
7. If the new enclosure shipped without its disks installed, install the disks in the enclosure.
8. Install the front bezel on the new enclosure.
9. Close the console, if present.
10. Attach the expansion (back-end) cables to the new enclosure.
11. Attach the power cords to the new enclosure.
12. Verify the operation of the new enclosure.

Verifying shipping package contents

Confirm that you received all necessary equipment needed to install the new 25-drive DAE.

Verify that you received the following:

<table>
<thead>
<tr>
<th>Component</th>
<th>Quantity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Disk-array enclosure (25-drive DAE)</td>
<td>1</td>
</tr>
<tr>
<td>Rail kit, including Snap-in rails (2)</td>
<td>1</td>
</tr>
<tr>
<td>Screws (3 per rail)</td>
<td></td>
</tr>
<tr>
<td>Power cords</td>
<td>2</td>
</tr>
<tr>
<td>Bezel for disk-array enclosure (with key)</td>
<td>1</td>
</tr>
<tr>
<td>mini-SAS HD cables (either 1 meter or 2 meter copper) that connect disk-array enclosures to each other (1 meter cables) or to DPE (2 meter cables)</td>
<td>2</td>
</tr>
</tbody>
</table>
Choosing where to install the DAE

Before installing the new DAE, you should determine the placement of the new enclosure within the rack.

Procedure

1. We recommend that you install the DAE in the next available 2U space directly above the DPE or the last DAE in the system.
   
   Most cabinets mark 1U increments with horizontal lines or small holes in the channels.

2. Considering these recommendations, choose a 2U space in the cabinet for the DAE.
Adding the new 25-drive DAE

Take the following actions to install the new 25-drive DAE into the system.

Removing a filler panel

In most cases, the front space into which you will install the enclosure is covered by a filler panel, which is attached to latch brackets. If one or more filler panels cover the space where you want to install the enclosure, remove each panel using the procedure that follows.

Procedure

1. Remove the filler panel.
2. Use a flatblade screwdriver or similar tool to pry off the latch brackets (Figure 1 on page 10).

![Figure 1 Prying off a latch bracket](CL4064)

Installing the rails in the cabinet

Note

The snap-in rails are dedicated left and right, and cannot be interchanged.

Procedure

1. Orient the rails. Face the front of the cabinet when orienting the left and right rail placement. The front edge of each rail is stamped L or R.
2. From the rear of the cabinet, insert the adapters into the holes on the rear rack channel with the rail extended as shown in Figure 2 on page 11.
3. Push the rail into the rear mounting holes until the spring clips snap into place on the outside of the rear channel.
Ensure the holes on the rail line up with the holes on the cabinet. This will ensure proper alignment of the rails. Also, check that the rails are level and using the same cabinet Unit markers from front to rear. Ensure you are using the same unit markers from the front of the cabinet to the rear of the cabinet.

Figure 2 Push rail into rear channel mounting holes

4. From the rear of the cabinet, secure the rails in place using one M5 screw on each rail.

Figure 3 Installing the M5 Screw

5. Working from the front of the cabinet, align the adaptor with the mounting hole on the front of the rack as shown in Figure 4 on page 12.

Ensure the holes on the rail line up with the holes on the cabinet. This will ensure proper alignment of the rails. Also, check that the rails are level from front-to-back and left-to-right. Ensure you are using the same unit markers from the front of the cabinet to the rear of the cabinet.

6. Push in on the spring clip while pulling the rail forward. When the spring clip is forward of the front rack channel, and the adaptor is in the mounting holes, release the spring clip so it holds the rail in place.
CAUTION

Ensure the spring clip is securely attached to the channel. It may be necessary to push in on the clip to assist in snapping it into place.

Figure 4 Securing rail to front channel

Installing the DAE on the rails

CAUTION

The enclosure is heavy and should be installed into or removed from a rack by two people. To avoid personal injury and/or damage to the equipment, do not attempt to lift and install the enclosure into a rack without a mechanical lift and/or help from another person.

L'enclosure étant lourde, sa mise en place dans l'armoire nécessite deux personnes. Afin de ne pas vous blesser et/ou endommager le matériel, n'essayez pas de soulever et d'installer l'armoire sur une rampe sans avoir recours à un relevage mécanique et/ou à l'aide d'une autre personne.

Das Gehäuse ist schwer und sollte nur von zwei Personen in einem Rack installiert werden. Zur Vermeidung von körperlichen Verletzungen und/oder der Beschädigung des Gerätes, bitte das Gehäuse nicht ohne die Hilfe einer zweiten Person anheben und einbauen.

Il contenitore è pesante e dev'essere installato nel rack da due persone. Per evitare danni personali e/o all'apparecchiatura, non tentare di sollevare ed installare in un rack il contenitore senza un sollevatore meccanico e/o l'aiuto di un'altra persona.

Debido a su considerable peso, la instalación del compartimento en el bastidor deben realizarse siempre dos personas. Para evitar daños personales o en el equipo, el compartimento no debe levantarse ni instalarse en el bastidor sin la ayuda de un elevador mecánico o de otra persona.

本設備相当沉重，安裝置機架時應由兩人搬動。切勿在未經機械搬動車和（或）他人協助的情況下，獨自搬動和安裝本設備，以免受傷和（或）損壞設備。
Do not install the enclosure without the rear rail screws installed and fully tightened. If the screws are not installed and tightened, the rails could rotate out of position, possibly causing the enclosure to fall, causing damage to the DAE and causing personnel injury.

Procedure

1. With help from another person, lift the enclosure and, from the front of the cabinet/rack, slide the enclosure onto the rails.

   Figure 5 Sliding the enclosure onto the rails

When the enclosure slides to the back of the cabinet, the rear tabs on the rails insert into the notches in the rear of the enclosure. The tabs secure and support the rear of the enclosure.

   Figure 6 Rail tabs securing the rear of the enclosure

2. Secure the front of the enclosure to the front vertical channels with four screws (two per side), but do not tighten the screws until they are all in place.
Installing disks

If the disks shipped separately from the enclosure, install them in the enclosure now. If the disks are already installed in the enclosure you are ready to install the enclosure’s bezel.

Handling disks

Disks are extremely sensitive electronic components. Always handle a disk gently, and observe the following guidelines:

- Follow the instructions described in Removing, installing, or storing replaceable units on page 5.
- Do not stack disks upon one another, or place them on hard surfaces.
- Make sure that the replacement disk has the same part number or the part number of an approved replacement for the faulted disk. The part number (PN005xxxxxx) appears on the disk. A replacement disk should be the same type (example: SAS, FLASH) and have the same capacity (size and speed) as the disk it is replacing.
- When removing a spinning disk, pull the disk partially out of the slot, then wait 30 seconds for the drive to spin down before removing it.
- When installing multiple disks in a powered up system, wait at least 10 seconds before sliding the next disk into position.
- Place disks on a soft, antistatic surface, such as an industry-standard antistatic foam pad or the container used to ship the disk.

Installing a disk

Refer to Figure 8 on page 15 while performing the procedure that follows.

Procedure

1. Attach an ESD wristband to your wrist and the enclosure in which you are installing the disk.
2. Align the disk with the guides in the slot.
3. With the disk carrier latch fully open, gently push the disk into the slot. The latch begins to rotate downward when its tabs meet the enclosure.
4. Push on the orange latch tab until the disk is seated in the slot.
5. Push the handle down to engage the latch.
Installing the front bezel

Before you begin

**CAUTION**

If the protective plastic strip is present on the front of the bezel, it must be removed before placing the system into operation. Failure to remove the protective plastic strip will cause the system to overheat.

Refer to Figure 9 on page 15 while performing the procedure that follows.

Procedure

1. If present, remove the protective plastic strip from the front of the bezel.
2. Align the bezel with the enclosure.
3. Gently push the bezel into place on the cabinet until it latches.
4. If the bezel has a key lock, lock the bezel with the provided key.

**Figure 9 Installing the bezel**
Connect cables to installed DAE

Continue the installation of the optional DAE by connecting the back-end SAS cables, and then connecting the DAE to rack power.

Use the next tasks to correctly locate, label, and connect the SAS cables to the new DAE and the storage processors or other DAEs, and to connect the DAE to rack power supplies.

Cable label wraps

Each system comes with a cable label wrap guide or set of cable label wraps to affix to the cables. These labels should be affixed to the appropriate cables as you connect the cables.

Note

If your system was assembled at the factory, all the cable labels have been affixed to the cables except for any DAEs you have ordered. Additionally, if your system was not assembled at the factory, the cable kit supplied with your product will have all the required cables already labeled except for the DAEs.

Attaching the expansion (back-end) cables

Do NOT FORCE the cable into a connector. A click indicates that the cable is completely seated in the connector.

Before you begin

To prepare for this cabling task:

- Locate the mini-SAS HD cables to be used to connect to the newly installed expansion DAE.
  Typically these cables are 2-meters long. You use longer cables, typically 5-meters or 8-meters, to connect enclosures located in different racks. Cables are shipped without labels attached. The cables and ports are not colored.
- Locate the sheet of cable labels provided.

 Orient the cable connectors as described in the procedure that follows, making sure that you do NOT connect:

- A DAE expansion port 0 to another expansion port 0.
- Any A-side ports to B-side ports.

The drives in the DPE are internally connected to the first back-end bus, so connect new DAEs for the following situations to create or expand the back-end buses:

Procedure

- Connect the first optional expansion DAE to port 1 of the DPE to create back-end bus 1 (BE1) and designate this DAE as enclosure 0 of this bus. We refer to the address of this enclosure as BE1 EA0 (1_0):
a. Label a pair of mini-SAS HD cables using the blue labels shown here.

<table>
<thead>
<tr>
<th>Expansion port cable labeling details</th>
<th>Primary port cable labeling details</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Label part number</strong></td>
<td><strong>Label</strong></td>
</tr>
<tr>
<td>046-001-562</td>
<td>046-021-012</td>
</tr>
<tr>
<td>046-003-750</td>
<td>046-021-013</td>
</tr>
</tbody>
</table>

b. Connect port 1 on SP A in the bottom slot in the DPE to port A on the link control card A (LCC A) at the bottom of the DAE. [1]

c. Connect port 1 on SP B in the top slot in the DPE to port A on the link control card (LCC B) at the top of the DAE. [2]

- Connect the second optional expansion DAE to the DPE expansion port 0 to extend back-end bus 0 (BE0). For Unity 480/F, 680/F and 880/F models, this DAE is enclosure 0 of the bus, and its enclosure address is BE0 EA0 (0_0). For all other Unity models, this DAE is enclosure 1 of the bus, and its enclosure address is BE0 EA1 (0_1).
a. Label a pair of mini-SAS HD cables using the orange labels shown here.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

b. Connect port 0 on SP A in the bottom slot in the DPE to port A on the link control card A (LCC A) at the bottom of the DAE. [1]

c. Connect port 0 on SP B in the top slot in the DPE to port A on the link control card (LCC B) at the top of the DAE. [2]

- To connect first DAE to any of the remaining SAS ports on the SP SAS modules, cable the DAE to the 12-Gb/s SAS modules in the DPE 0, port 0 through port 3, to create back-end bus 2 through 5, BE2-BE5:

**Note**

The optional back-end 12-Gb/s SAS module is not supported on all Unity storage systems.
a. Label a pair of mini-SAS HD cables using the appropriate labels (black, green, brown, or blue) shown here.

b. Connect port B on the link control card A (LCC A) of the lower-numbered DAE to port A on the link control card A (LCC A) of the higher-numbered DAE. [1]

LCC A is located on the lower portion of the DAE.

c. Connect port B on the link control card B (LCC B) of the lower-numbered DAE to port A on the link control card B (LCC B) of the higher-numbered DAE. [2]

LCC B is located on the upper portion of the DAE.

**Attaching DAE power cable to each power supply/cooling module**

On each power/cooling module in the DAE, perform appropriate procedure for the AC or DC powered DAE.

**Procedure**

- On an AC power/cooling module, disconnect the AC power cable from the power/cooling module:
  
  a. Plug the power cable into the connector on the power/cooling module
  
  b. Attach the retention bail (strain relief) to the base of the power cable.

  The retention bail prevents the power cable from pulling out of the connection.

  ![Figure 10 Attaching power cable and securing the retention bail](image)

- On a DC power/cooling module, push the power cable plug into the connector until it snaps in place.
Verifying the new 25-drive DAE

Verify that the new 25-drive DAE is recognized by your system, and operating correctly using the procedure that follows.

Procedure

1. In Unisphere, select System View.
2. On the Summary page, confirm that the system status is OK.
3. Select the Enclosures page.
4. Verify that the 25-drive DAE appears with OK status in the enclosure view.

   You may need to refresh Unisphere by clicking on the refresh icon next to the Enclosures view.
   Select the DAE with the Enclosure dropdown menu and then select the Front view of the new 25-drive DAE.

Figure 11 New DAE location - example

If the system health monitor shows the part as faulted, contact your service provider.
Adding an optional 25-drive DAE
