The groundbreaking possibilities of artificial intelligence (AI) are creating a lot of buzz across a wide range of industries. A big part of that buzz is machine learning (ML), a subset of AI that refers to giving computers the capacity to learn new tasks without being explicitly programmed by humans. As a critical underpinning of AI, companies worldwide are seeking to support ML solutions that better enable data scientists to uncover the value hidden in vast amounts of data.

One of the most important elements of any ML platform is its ability to democratize data access — empowering users to quickly and easily build predictive models with full transparency. That’s why many organizations are choosing DataRobot®, an advanced enterprise AI software platform that encapsulates the knowledge, experience and best practices of the world’s leading data scientists into an automated ML solution so you can quickly and easily build highly accurate predictive models without previous coding and ML skills.

Dell EMC worked with DataRobot to bring you the Dell EMC Reference Architecture for DataRobot. You can accelerate AI success with the team you already have in place because DataRobot automates many of the tasks needed to develop AI and ML applications, enabling more people to succeed with ML by simply utilizing their understanding of their data and business and letting DataRobot do the rest.

For added flexibility, the Dell EMC engineering-validated design for DataRobot can be delivered as a system that’s optimized specifically for your unique workloads and use cases. Together, Dell EMC and DataRobot deliver simplicity, automation, accuracy and transparency to help you create an AI-driven enterprise.
