

LEADING POWER COMPANY GETS DATA HURRICANE-READY

FieldCore, a GE company, deploys an efficient and effective backup solution at its disaster recovery site in the four days before Hurricane Irma struck Florida by engaging Dell EMC

COMPANY: FieldCore

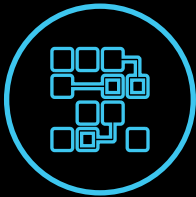

INDUSTRY: Energy

COUNTRY: United States

CHALLENGE

Implement a **backup solution** in a shortened window of time, due to uncontrollable circumstances

SOLUTION

Dell EMC Data Domain Virtual Edition and Avamar Backups Replication

Dell EMC Data Domain

Dell EMC Data Protection Software

Dell EMC RecoverPoint (already installed solution)

BENEFITS

Of backups done in less than an hour vs. 24 hours

Data replicated before any power outage

4:1 dedupe ratio with former solution vs. a 41:1 dedupe ratio with Dell EMC

Reduction in backup volume

“We went from a 4:1 deduplication ratio to a 41:1 deduplication ratio with Data Domain that actually benefited us immensely during Hurricane Irma. It allowed us to replicate the data faster and have that data replicated in time before the storm actually hit.”

- Kerry Johnson, Senior Systems Engineer, FieldCore
