DELL Technologies

Enabling work-from-home at scale

IT leaders are facing a new challenge —
to rapidly deploy and support a large
work from home workforce

You're asking questions like:

- “Do our professionals have computers, monitors, headsets, and other equipment at home that are suitable to their workflows?”
- “How will our teams stay productive and effective without the collaboration tools that we take for granted in the office — conference rooms, whiteboards, and so forth?”
- “How do we get security and management capabilities for PCs at home that are equal to that in the office?”

Dell Technologies can help

Dell Technologies Remote Productivity Series helps organizations **quickly enable** and **support** a significantly **expanded remote workforce**.

IT leaders, like you, can equip end users with personalized technology, collaboration, and communication, and options for **secure, uninterrupted remote access**.

Remote Productivity Series

1

Ready to Work

Dell System

Laptop or Desktop

Teleworker Kit (optional)

Large monitor, headset, dock,
keyboard, mouse
